Natanael Moreira de Lemos

Software Engineer

Fortaleza, Brazil | +55 (85) 98640-3153 | natan-moreira1@hotmail.com | linkedin | github

SUMMARY

Biography Summary *- FullStack Software Engineer with over 5 years of experience designing and building scalable cloud-native applications using ReactJs, NodeJs, .Net, Python, AWS and Azure. Passionate about distributed systems, software architecture and developer experience with proven experience implementing AI-powered document processing pipelines, asynchronous workflows and observability solutions in production. Committed to delivering maintainable, high-quality software through SOLID principles, Clean Architecture and Test-Driven-Development (TDD).*

SKILLS OR AREAS OF EXPERTISE

- Frontend
- Backend
- Reactjs
- .NET
- NodeJS
- Javacript
- Python
- Golang
- TDD
- SOLID
- Clean Architecture
- Clean Code
- React Native
- Cypress
- Playwright
- PostgresSQL
- Redis
- MongoDB
- AI Models
- AI Agent Workflows
- AWS
- Azure
- Git

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer *07/2025 – Present*
Hapvida,Fortaleza,Brazil, (remote)

- Develop and maintain scalable front-end applications using React.js, implementing new features and improving existing ones while following SOLID, TDD, and modern software engineering best practices.
- Build complex and highly interactive user interfaces using React Query for efficient server-state management and Zustand for global state management, focusing on performance, maintainability, and user experience
- Implement automated end-to-end tests with Cypress, contributing to application reliability and reducing regressions during feature delivery.
- Implement automated end-to-end tests with Cypress, contributing to application reliability and reducing regressions during feature delivery.
- Contribute to backend development using .NET, implementing APIs and business logic while collaborating closely with cross-functional teams.
- Monitor and troubleshoot production applications using Datadog and the Elastic Stack, leveraging logs and observability tools to investigate issues and improve system reliability.
- Work with cloud-native applications hosted on Microsoft Azure and maintain Azure DevOps CI/CD pipelines to automate build, testing, and deployment processes.

FullStack Developer *08/2025 – 06/2026*
Lumi, Sao Paulo,Brazil, (remote, part-time)

- Developed and maintained full-stack features for an energy billing and compensation platform, building user interfaces with React.js, Zustand, and React Query, while collaborating closely with backend services.
- Designed and implemented scalable APIs using Node.js and NestJS, following SOLID, Clean Architecture, TDD, and RESTful API best practices across multiple microservices and business applications.

- Refactored the invoice reader architecture, introducing a modular and testable design that enabled unit testing and significantly improved maintainability.
- Designed an asynchronous invoice processing pipeline using AWS Lambda, SQS, S3, MongoDB, and PostgreSQL to process AI-based invoice extraction workflows.
- Developed and designed an observability architecture using OpenTelemetry and the LGTM stack.
- Developed and maintained integrations with ERP systems and solar energy providers, implementing ETL processes to synchronize billing and operational data across multiple external platforms.
- Worked extensively with AWS services, including EC2, ECS, Lambda, S3, SQS, SES, ECR, and PostgreSQL, contributing to cloud-native application development and distributed systems.
- Built and maintained GitHub Actions CI/CD pipelines, automating build, testing, and deployment processes across multiple Node.js applications.

Software Engineer *07/2021 – 07/2025*
BTG Pactual,Sao Paulo,Brazil, (remote)

- Development of web applications in React along with Azure pipelines for CI/CD flows with Jenkins and Kanban and Scrum framework
- Unit and integration testing with jest and end-to-end testing with cypress, front-end micro architecture and use of storybook for component library and design system and React Query to improve request speed and cache
- Use of practices such as TDD and Clean Architecture with a focus on continuous code improvements
- Use of Azure and Aws, using Infra as Code with cloudformation and services such as Aurora DB, SQS, SnS and Lambdas function

FullStack Developer *09/2020 – 07/2021*
Insight Data Science Lab,Fortaleza,Brazil, (remote)

- Development of web applicationsin response to the state government using ReactJs and following a style guide and using libraries such as Leaflet to visualize maps
- Creation of CI/CD routines using Gitlab CI/CD, in addition to using AWS resources, such as EC2
- Creation of Rest API using Spring Boot and mongoDB using Mongo Atlas, in addition to domain modeling and creation of the application architecture
- Furthermore, unit tests were added to the Backend and end-to-end tests to the FrontEnd using Cypress

FullStack Developer *10/2020 – 12/2020*
Medical Devices,Fortaleza,Brazil, (remote, part-time)

- Development of a application in React using Redux
- Development of web api using Ruby on Rails performing integration with payment gateways like Pagarme

FullStack Developer *06/2019 - 09/2020*
GTI Engenharia JR,Fortaleza,Brazil, (remote, voluntary part-time)

- Development of web applications using Ruby on Rails, in addition to integration with payment gateways, use of PostgresSQL
- Creating websites using Wordpress

EDUCATION

Computer Engineer, Bachelor's degree 01/2018 - *08/2022*
Federal University of Ceara

Microsoft Certified: Azure Data Fundamentals

Microsoft

Microsoft Certified: Azure AI Fundamentals
Microsoft

ADDITIONAL SKILLS

System Design, Software Architecture, Distributed Systems, Event-Driven Architecture, API Design, Asynchronous Processing, AI Agents, Generative AI Integration, ETL & Data Integration, Observability & Monitoring, Performance Optimization, Requirements Analysis, Technical Troubleshooting, Cross-functional Collaboration, Technical Communication, Leadership.

LANGUAGES

Portuguese: Native | **English**: Advanced (C1)
